Project Proposal: Projenitor

1. Introduction

I am Likhon Mandal, a member of a long-established community that consists of approximately 10,000 people, all descendants of **Bhagoban chandra barai**. Our community is spread across four districts: Madaripur, Gopalgong, Barishal, and Pirojpur. Each year, on Bangla 10th Falgun, a grand gathering is held, where people from all these districts come together at a preselected location. This year, our village hosted the 93rd gathering.

In 2013, a 305-page book was published containing detailed information about every person in our community and their ancestors. A updated version will be published next year. It is very troublesome and lengthy process to update the book and also this valuable resource is currently only available in physical book form, limiting accessibility and the ability to update or expand the data.

To preserve this rich history and make it more accessible to all community members, I aim to transform this book into a comprehensive web-based platform.

By digitizing this extensive collection of genealogical and personal information, we will create a dynamic and easily accessible platform that allows the community to stay connected, share knowledge, and track changes over time.

2. Objectives

- **Digitize the community's ancestral data:** Convert the 305-page book of ancestral records into an easily searchable digital format.
- **Provide an easy-to-use platform for accessing member data:** Allow users to search for relatives and ancestors based on specific criteria (name, blood group, work, etc.).
- **Regular updates:** The system will support adding new members, updating personal details, and tracking important events (births, deaths, etc.).
- **Community engagement:** Incorporate features like notices, Gathering, committee details, and history to improve communication and community engagement.

3. Features

- **Search Features:**
 - **Name:** Search for individuals by their name.
 - **Workplace:** Search by the workplace of individuals.
 - **Educational Institution:** Find people based on their education history.
 - **Blood Group:** Search for individuals by blood type for blood donation.
 - **Country:** Search based on the country of residence or origin.
 - **Present Address:** Search for people based on their current address.
 - **Permanent Address:** Search for individuals based on their permanent address.

- **Additional Features:**

- **Notice System:** A dynamic board to post community updates, news, and events.
- **Help Desk:** A system where members can ask for assistance or provide support.
- **Gathering Details:** Information about community Gathering, including locations, times, and attendees.
- **Committee Details:** Display information about committee members, their roles, and responsibilities.
- **History Section:** A section dedicated to the history of the community, its origins, and key milestones.

4. Expected Outcomes

- **Easy Access to Ancestral Data:** Community members will be able to quickly search for and find information on their ancestors and relatives.
- **Improved Communication:** The notice system and event details will improve communication across the community.
- **Increased Engagement:** Features like the help desk and history section will foster greater engagement and participation.
- **Preservation of History:** Digitizing the community's history will ensure that it is preserved and accessible to future generations.

5. Conclusion

This platform will serve as an essential tool for preserving the community's history, fostering communication, and connecting relatives. By digitizing the ancestral book and creating a dynamic web platform, members will be able to easily access genealogical data and stay updated on community events. This project will strengthen the community bond and ensure that the history and heritage of ***Bhagoban chandra barai's*** . descendants continue to thrive.
